RESTful Microservice with Express
Project Requirements

Minimum requirements

Any items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The project must be committed to a version control system with clear commit messages reflecting progress.	
The application must use a `.env` file to securely store configuration variables (Ex: `AWS_ACCESS_KEY_ID`, `AWS_SECRET_ACCESS_KEY`).	
The project must follow a modular structure with separate folders for services, models, and controllers.	
The database connection logic must be in a `services/database.js` file.	
The app must connect to a `DynamoDB` instance using the `AWS` `SDK`.	
The following RESTful API routes must be implemented and functional:	
GET /resources – Retrieve all resources.	
GET /resources/:id – Retrieve an resource by ID.	
POST /resources – Create a new resource.	
PUT /resources/:id – Update an resource by ID.	
DELETE /resources/:id – Delete an resource by ID.	
The app must include a Dockerfile to containerize the application.	
The Docker container must expose port 3000 and use environment variables for configuration.	

Code convention and UI/UX requirements

More than three items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The code must be well-organized and modular, with functions handling specific tasks.	
The code should follow Javascript best practices and be well-documented with comments where necessary.	
The terminal interface must be user-friendly and intuitive, with clear prompts and instructions.	
The application must validate user input to ensure that it is correct and within expected parameters.	
Error messages should be clear and informative, guiding users to correct their input.	

README requirements

More than two items marked incomplete in this section will result in the project receiving a failing grade.

	Complete?
The app's name.	
A brief description of your app and its functionality.	
A ***Getting started*** section. This section should include instructions on how to interact with your app.	
A ***Technologies used*** section. This section should list the principal technologies used by your application, for example, Javascript and any major frameworks or libraries.	
If necessary, an ***Attributions*** section. This section should include links to any external resources (such as libraries or assets) you used to develop your application that require attribution. You can exclude this section if it does not apply to your application.	

Summary

Project meets minimum requirements and passes.
